Intertape Polymer Group Moves *Inside the Box* with New Protective Packaging Line

BRADENTON, FL (September 11, 2006)— Intertape Polymer Group, known for its expertise in packaging solutions around and on the box for over 25 years, has moved inside the box with the addition of its newest iCushion™ Protective Packaging line.

“Entering into the protective packaging market is a natural progression for IPG,” states Greg Yull, Chief Operating Officer for Intertape. “Our aligned distribution partners and end-users have shown great interest and welcome this addition to our product offering. This allows us to enhance our relationships and value proposition by furthering our ability to successfully serve as a ‘Single Source’ with ‘Multiple Resources’. With products strategically located at our distribution centers, our customers can easily combine protective packaging with their regular orders of IPG stretch film, tape, shrink film and machinery. This will create order efficiencies, lower costs and improve inventory turns. We remain continuously focused on offering the broadest range of products in the industry.”

The iCushion™ Protective Packaging Inflatable Air Pillow System offers a convenient, innovative void-fill solution designed to securely cushion products during shipment while delivering clean, professional-looking packages. A complete standard system consists of the following: AP-8000C air pillow machine, cart with storage bin, transfer stand and on-demand photo eye.

Air pillows are an ideal void-fill alternative that can improve productivity and free up valuable warehouse space over bulky, conventional packaging materials. iCushion™ Air Pillows are available in four sizes: 8”x4”, 8”x6”, 8”x8” and 8”x10”. With a roll length of 2900’, they are engineered to reduce costs by minimizing roll changeovers and limit down time. “One roll of film can actually yield the equivalent cubic footage of 15-18 bags of loose-fill, depending on pillow size and air volume,” explains Mike Weston, Protective Packaging Marketing Manger for Intertape.

iCushion™ Air Pillows are lightweight, perforated for easy separation and made of clear, non-abrasive poly which will not scratch the product’s surface. They are reusable and recyclable, with disposal requiring a low volume in landfills when deflated.

The AP-8000C dispenser is easy to operate, weighs only 44 lbs, and inflates on-demand at an industry leading speed of 70 feet per minute. Its lightweight, compact design and internal air supply help create work-place flexibility and lower start-up costs.

The iCushion™ Inflatable Air Pillow System will be featured at PackExpo and Distripak in Chicago this Fall. “Our main focus this year is showcasing our new products and new market segments, and how these products complement our ability to provide the complete packaging solution to our customers and markets,” states Mr. Yull.

For additional information regarding iCushion™ Protective Packaging, please send an e-mail to icushion@itape.com or contact your local IPG sales representative.
